Dilithium adaptor to massage mobile video delivery

Story posted: May 12, 2008

Dilithium introduced a content adapter solution that automates in real time the format and delivery method of video content over multiple networks to any device.

Transcoding video for mobile devices is a major challenge today because content producers have to account for different bandwidth speeds and varying screen sizes. The Dilithium Content Adapter builds on the company's [third-generation mobile video solutions](#) to enable content providers and network owners to transcode, transrate and transsize multimedia content in real time. The DCA also is flexible enough that companies can target advertising within the content.
