

Dilithium takes video to RIM

Tim Green

Tuesday Jan 20, 2009

Tech firm unveils live video and Video on Demand streaming support for Blackberry handsets.

The solution is powered by the Dilithium Content Adapter (DCA), which already supports device ranges from Nokia, Motorola, Samsung, LG, Sony Ericsson and Apple. DCA solution is an infrastructure offering that can be deployed by operators and service providers.

Customers do not need to install a special application on their handset, and can access the video services via EDGE, WiFi, or 3G networks, depending on the Blackberry model.
